THE COMPANY

The JONIEC® Company was founded 27 years ago. Our motto: **“We set new boundaries”** inspires us to constantly improve the level of our service and product quality. Each year we implement new products paying attention to our customers’ needs and queries. We keep an eye on changing trends and tastes so we are able to offer products that keep up with up-to-date styles in architecture. We try our best to make all our customers know they are important to us and they can depend on us at each stage of planning and purchase.

Welcome to our company!

“We set new boundaries” is a motto which determines our activities: not only the everyday life of our company but also the activities which support interesting social action projects. We help local communities, support charity organisations, sponsor young talented athletes. We promote the idea that everyone can overcome barriers and difficulties – by setting their our own boundaries.

FENCE FOUNDATIONS

Using concrete foundations is a great solution which allows for fast and cost-effective building of a fence base. Foundations can be used with all metal, wooden and PVC panel systems available on the market as well as with wire fences.

CONCRETE CHEMICALS

IMPREGNANT

Impregnant for concrete and stone surfaces. Impregnant increases resistance to dirt and atmospheric conditions, reinforces surfaces by strengthening colour and reducing abrasiveness. With limestone, sandstone and other natural stones, it is recommended to make a pre-test.

SEALING GLUE

Sealing glue for fence and stone blocks, precast elements. A binder for gluing and sealing fence and stone blocks as well as precast elements. Strong, one-component adhesive polyurethane glue / sealant. It possesses very good adhesion to concrete, brick, metal and many other substrates.

PAINT

A product for painting and renovation of concrete surfaces with very high resistance to atmospheric conditions and abrasiveness and very good adhesion to concrete surfaces. Made of the most modern materials, it guarantees the highest quality. It is recommended for painting concrete caps which can lose their fresh colour over time.

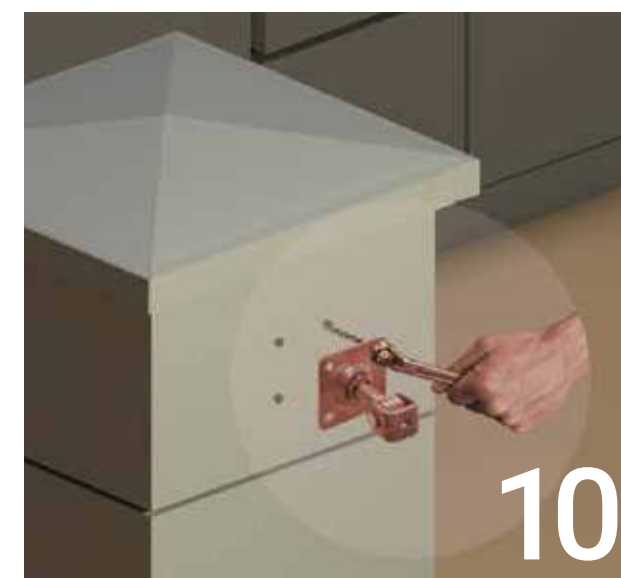

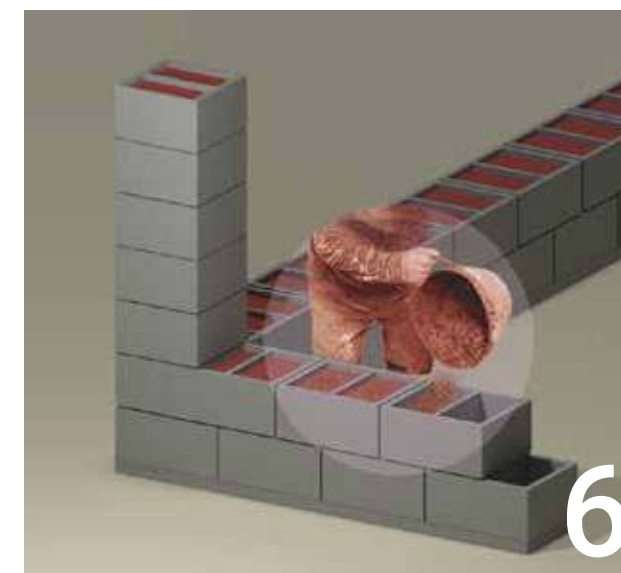

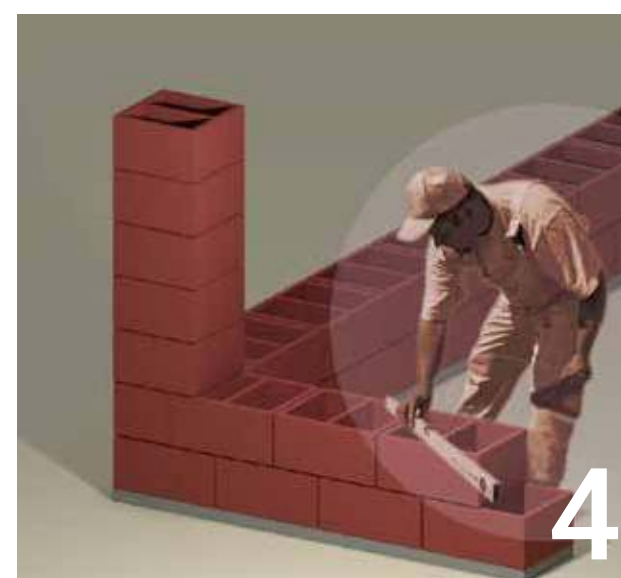

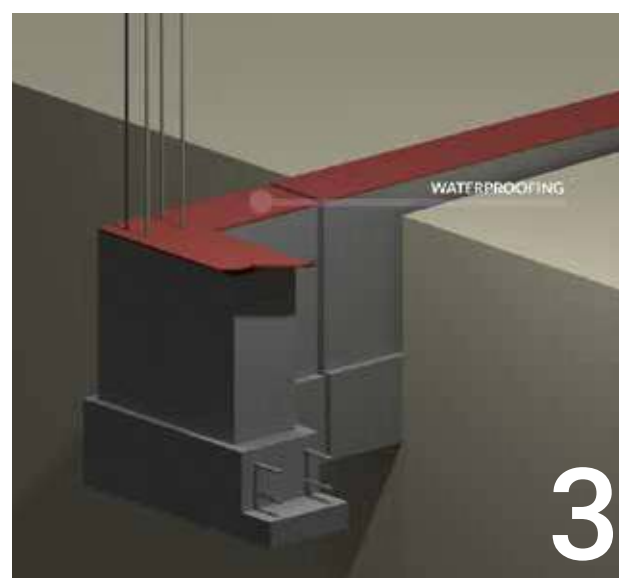

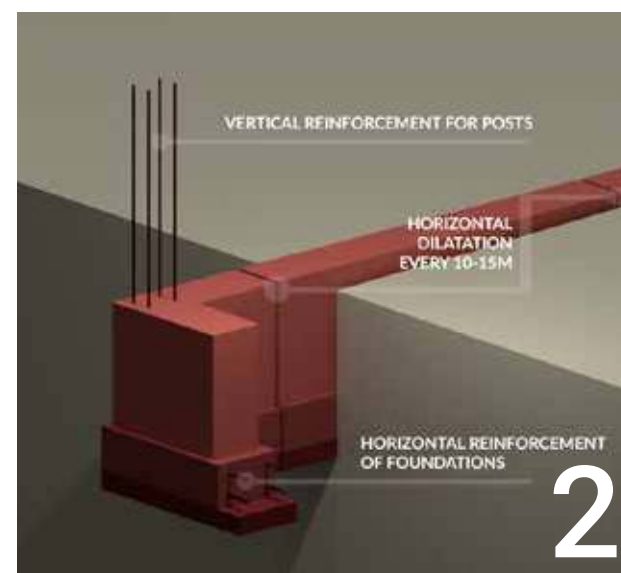

PREPARATION FOR REMOVAL OF EFFLORESCENCE

Professional preparation intended for removal of carbonate efflorescence – white stains and infiltration stains, which come out on concrete products: fence blocks, wall elevation, scarp elements, planters. It is recommended for clear-up of concrete surfaces before impregnation or painting.

ASSEMBLY INSTRUCTIONS

FENCES

1. Excavation for foundation
2. Foundation
3. Insulation
4. Laying blocks
5. Gluing blocks
6. Pouring concrete
7. Caps
8. Silicone sealing
9. Painting, impregnation
10. Fixing gates
